FLYING BOAT

LET YOUR PASSENGERS TRAVEL IN COMFORT
WITH THE *ECO LIMOUSINE*

STEP INTO
THE FUTURE:

SET A
NEW STANDARD
IN PASSENGER
TRANSPORT

An aerial photograph of a small boat moving through the ocean, creating a series of concentric circular waves. The water is a deep teal color, and the waves are white and frothy. The boat is a small, dark-colored vessel, possibly a speedboat or a small ferry, moving towards the center of the frame. The overall composition is circular, with the boat at the center of the concentric waves.

A UNIQUE SYSTEM FOR FLYING AT SEA

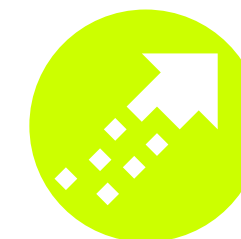

PERFORMANCE
&
ENVIRONMENT
FRIENDLY

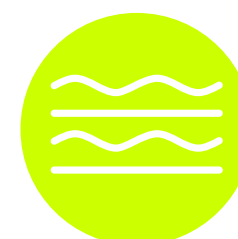

**25% to 45%
fuel savings***

compared to a conventional boat
of similar size

**Average speed
increased by 20%***

Due to the foils

Increased stability and comfort

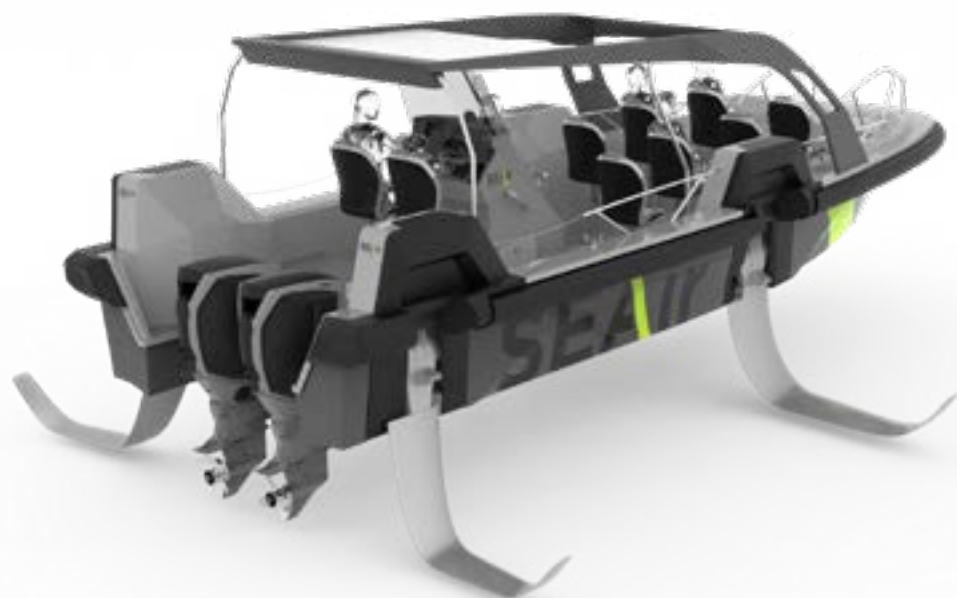

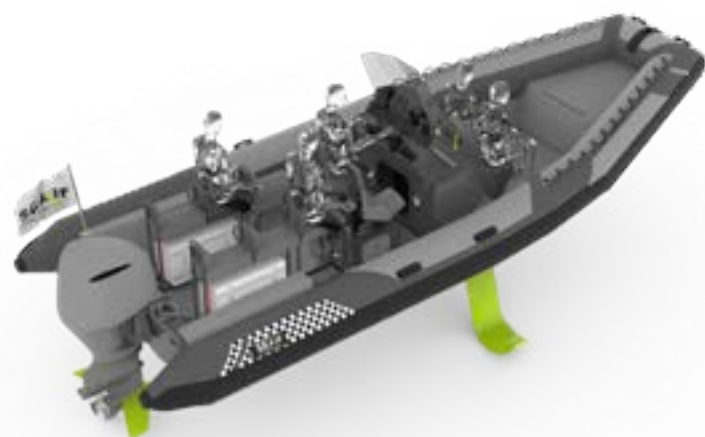

Reduced slamming in choppy or heavy seas.
Stable performance,
lifted 20cm above the surface

Clear, precise handling

No additional requirements,
easy berthing

*compared against the consumption of classic boat of the same size, under the same operating conditions
